

What happens if a custom role is already assigned to users and someone tries to delete that role?

For example:

- Deletion blocked with validation message
- Users automatically moved to another role
- Users lose access
- Soft delete only

Please specify the expected behavior.

can't delete

Is this role and permission management feature available on:

- Web application only
- Mobile application only
- Both Web and Mobile

Please specify the platforms in scope for testing.

only web application

Are there any integrations or downstream systems impacted by role permission changes?

For example:

- API authorization
- Report visibility
- External systems
- SSO/Identity provider
- Caching/session refresh behavior

Please specify any impacted areas that should be included in scope.

No

Should permission changes take effect immediately for already logged-in users, or only after next login/session refresh?

immediatly

The test strategy document has been generated successfully.
